

Capstone Project

Project out of 200 weighted points

Presentation out of 50 weighted points

Entity Relationship Diagram sent to and approved by instructors: 25 weighted points

Total: /275

You must come up with a real-world business problem to solve.

You can use the technologies of your choosing, although we recommend ASP.NET web application framework. If you want to use something other than ASP.NET, this must be discussed with the instructors.

You must read the following documents:

- Capstone Expectations
- Capstone Checklist
- User Stories Approval Process

User Stories:

(Required) As a developer, I want to get my project proposal, which must be in the form of user stories, approved by an instructor, so that I know I have a good project to work on.

(25 points) As a database designer, I want to create an entity relationship (ER) diagram to show the relationships amongst my tables in my normalized database and have it approved by an instructor, so that I have proper database architecture.

(50 points) As a presenter, I want to have a prepared presentation, so that I can accurately talk about the business problem I solved, technologies used, problem(s) encountered, and solution(s) to these problems.

(200 points) As a developer, I want to complete all the features (user stories) that were approved by an instructor during the project approval phase, so that I can have a functionality application.

You need 70% or better to have a “passing” capstone. This is one of the steps to being a graduate of devCodeCamp.
